Nitti Safety Footwear introduces their latest style: 2128/P, a lightweight safety shoe with a composite toecap. The 2128/P is a great partner for people looking for lighter, yet safe shoes for light industrial environments. This shoe contains no metal, making it airport-friendly so you can pass smoothly through metal detecting gantries in airports,

security facilities or electronics manufacturing.

This laced shoe is made out of genuine black water buffalo leather, has a flexible PU outsole and features Cambrelle® lining to keep the feet healthy.

With comfort being a critical factor, there is a removable cushion insole with arch support.

Weight also plays a considerable role here.

Lightweight shoes reduce fatigue from walking or standing for long hours.

The 2128/P is EN 20345 certified and belongs to the SB category and does not come with a protective mid plate making it more flexible, but not suitable for environments that require penetration resistance. The recommended use is airports, security facilities, electronics manufacturing, service industry and food & beverage outlets.
